User Manual - Timekeeping

Introduction

A comprehensive electronic time card system designed to streamline attendance tracking. This module automatically records employee time logs, whether captured from a biometric machine or entered via the Odoo attendance kiosk for any specified date and time range.

Key features include:

- **Day Type Definitions** : Easily assign classifications such as regular holidays, special holidays, rest days, or normal working days.
- **Automated Calculations** : Overtime and night differential computations are based on DOLE-compliant salary rate factors, ensuring accuracy and compliance.
- **Multiple Shift Support** : Manage various shifts seamlessly within the system.
- **Holiday Calendar** : Define annual holidays and view them in a user-friendly calendar format.

With the Timekeeping Module, managing attendance, shifts, and payroll integrations becomes effortless, making it an essential tool for modern HR and payroll operations.

Self-Service

Based on the software's configuration, a self-service process can be enabled. This feature allows employees to submit requests for overtime, schedule adjustments, changes in day type, or updates to their designated approver. Once these requests are reviewed and approved by a supervisor or manager, the adjustments are immediately applied to the employee's time card.
